# 5TH GRADE MATH SCOPE AND SEQUENCE

## EARLY FIRST QUARTER

**Number, Number Sense and Operations**
- A. Represent and compare numbers less than 0 through familiar applications and extending the number line.
- B. Apply number system properties when performing computations.
- C. Apply and explain the use of prime factorizations, common factors, and common multiples in problem situations.
- D. Use a variety of strategies, including proportional reasoning, to estimate, compute, solve and explain solutions to problems involving integers, fractions, decimals and percents.

**Mathematical Processes**
- A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
- B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
- C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
- D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
- E. Use deductive thinking to construct informal arguments to support reasoning and to justify solutions to problems.
- F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
- G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
- H. Use representations to organize and communicate mathematical thinking and problem solutions.
- I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
- J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
- K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.

## LATE FIRST QUARTER

**Number, Number Sense and Operations**
- A. Compare, order and convert among fractions, decimals and percents.
- B. Use and analyze the steps in standard and non-standard algorithms for computing with fractions, decimals and integers.
- C. Convert units of length, area, volume, mass and time within the same measurement system.
- D. Identify appropriate tools and apply appropriate techniques for measuring angles, perimeter or circumference and area of triangles, quadrilaterals, circles and composite shapes, and surface area and volume of prisms and cylinders.

**Measurement**
- A. Select appropriate units to measure angles, circumference, surface area, mass and volume, using:
  - U.S. customary units; e.g., degrees, square feet, pounds, and other units as appropriate.
  - Metric units; e.g., square meters, kilograms and other units as appropriate.
- B. Use representations, such as tables, graphs and equations, to represent problem situations.
- C. Use variables to create and solve equations and inequalities representing problem situations.
- D. Use symbolic algebra to represent and examine mathematical relationships.
- E. Use rules and variables to describe patterns, functions and other relationships.
- F. Use representations, such as tables, graphs and equations, to model situations and to solve problems, especially those that involve linear relationships.

**Geometry and Spatial Sense**
- A. Read, create and use line graphs, histograms, circle graphs, box-and-whisker plots, stem-and-leaf plots, and other representations when appropriate.
- B. Represent, analyze and generalize a variety of patterns and functions with tables, graphs, words and symbolic rules.
- C. Collect, organize, display and interpret data for a specific purpose or need.
- D. Determine and use the range, mean, median and mode to analyze and compare data, and explain what each indicates about the data.

## EARLY SECOND QUARTER

**Number, Number Sense and Operations**
- A. Use models and pictures to relate concepts of ratio, proportion and percent.
- B. Use a variety of strategies, including proportional reasoning, to estimate, compute, solve and explain solutions to problems involving integers, fractions, decimals and percents.

**Patterns, Functions and Algebra**
- A. Describe, extend and determine the rules for patterns and relationships occurring in numeric patterns, computation, geometry, graphs and other applications.
- B. Represent, analyze and generalize a variety of patterns and functions with tables, graphs, words and symbolic rules.
- C. Use variables to create and solve equations and inequalities representing problem situations.
- D. Use symbolic algebra to represent and examine mathematical relationships.
- E. Use rules and variables to describe patterns, functions and other relationships.
- F. Use representations, such as tables, graphs and equations, to model situations and to solve problems, especially those that involve linear relationships.
- G. Write, simplify and evaluate algebraic expressions.
- H. Analyze functional relationships, and explain how a change in one quantity results in a change in the other.

**Data Analysis and Probability**
- A. Describe, extend and determine the rules for patterns and relationships occurring in numeric patterns, computation, geometry, graphs and other applications.
- B. Represent, analyze and generalize a variety of patterns and functions with tables, graphs, words and symbolic rules.
- C. Collect, organize, display and interpret data for a specific purpose or need.
- D. Determine and use the range, mean, median and mode to analyze and compare data, and explain what each indicates about the data.

**Mathematical Processes**
- A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
- B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
- C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
- D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
- E. Use deductive thinking to construct informal arguments to support reasoning and to justify solutions to problems.
- F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
- G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
- H. Use representations to organize and communicate mathematical thinking and problem solutions.
- I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
- J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
- K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.

## LATE SECOND QUARTER

**Geometry and Spatial Sense**
- A. Identify appropriate tools and apply appropriate techniques for measuring angles, perimeter or circumference and area of triangles, quadrilaterals, circles and composite shapes, and surface area and volume of prisms and cylinders.
- B. Use representations, such as tables, graphs and equations, to represent problem situations.
- C. Use variables to create and solve equations and inequalities representing problem situations.
- D. Use symbolic algebra to represent and examine mathematical relationships.
- E. Use rules and variables to describe patterns, functions and other relationships.
- F. Use representations, such as tables, graphs and equations, to model situations and to solve problems, especially those that involve linear relationships.
- G. Write, simplify and evaluate algebraic expressions.
- H. Analyze functional relationships, and explain how a change in one quantity results in a change in the other.

**Data Analysis and Probability**
- A. Describe, extend and determine the rules for patterns and relationships occurring in numeric patterns, computation, geometry, graphs and other applications.
- B. Represent, analyze and generalize a variety of patterns and functions with tables, graphs, words and symbolic rules.
- C. Collect, organize, display and interpret data for a specific purpose or need.
- D. Determine and use the range, mean, median and mode to analyze and compare data, and explain what each indicates about the data.

**Mathematical Processes**
- A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
- B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
- C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
- D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
- E. Use deductive thinking to construct informal arguments to support reasoning and to justify solutions to problems.
- F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
- G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
- H. Use representations to organize and communicate mathematical thinking and problem solutions.
- I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
- J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
- K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.

**July 2008**
5TH GRADE MATH SCOPE AND SEQUENCE

EARLY THIRD QUARTER

Number, Number Sense and Operations
E. Use order of operations, including use of parenthesis and exponents to solve multi-step problems, and verify and interpret the results.

Geometry and Spatial Sense
A. Identify and label angle parts and the regions defined within the plane where the angle resides.
E. Use proportions to express relationships among corresponding parts of similar figures.
F. Describe and use the concepts of congruence, similarity and symmetry to solve problems.
G. Describe and use properties of triangles to solve problems involving angle measures and side lengths of right triangles.
H. Predict and describe results (size, position, orientation) of transformations of two dimensional figures.
I. Identify and draw three-dimensional objects from different views (top, side, front and perspective).
J. Apply properties of equality and proportionality to solve problems involving congruent or similar figures; e.g., create a scale drawing.

Data Analysis and Probability
C. Evaluate interpretations and conclusions as additional data are collected, modify conclusions and predictions, and justify new findings.
D. Compare increasingly complex displays of data, such as multiple sets of data on the same graph.

Mathematical Processes
A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
E. Use deductive thinking to construct formal arguments to support reasoning and to justify solutions to problems.
F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
H. Use representations to organize and communicate mathematical thinking and problem solutions.
I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.

LATE THIRD QUARTER

Measurement
F. Analyze and explain what happens to area and perimeter or surface area and volume when the dimensions of an object are changed.
G. Understand and demonstrate the independence of perimeter and area for two dimensional shapes and of surface area and volume for three-dimensional shapes.

Geometry and Spatial Sense
B. Draw circles, and identifies and determines the relationships among the radius, diameter, center and circumference.

Mathematical Processes
A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
E. Use deductive thinking to construct informal arguments to support reasoning and to justify solutions to problems.
F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
H. Use representations to organize and communicate mathematical thinking and problem solutions.
I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.

EARLY FOURTH QUARTER

Mathematical Processes
F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.

Mathematical Processes
A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
E. Use deductive thinking to construct informal arguments to support reasoning and to justify solutions to problems.
F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
H. Use representations to organize and communicate mathematical thinking and problem solutions.
I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.

LATE FOURTH QUARTER

Number, Number Sense and Operations
C. Develop meaning for percents, including percents greater than 100 and less than 1.

Patterns, Functions and Algebra
C. Use variables to create and solve equations and inequalities representing problem situations.
H. Solve linear equations and inequalities symbolically, graphically and numerically.
I. Explain how inverse operations are used to solve linear equations.
K. Graph linear equations and inequalities.
M. Approximate and interpret rates of change from graphical and numerical data.

Data Analysis and Probability
G. Evaluate conjectures and predictions based upon data presented in tables and graphs, and identify misuses of statistical data and displays.

Mathematical Processes
A. Clarify problem-solving situation and identify potential solution processes; e.g., consider different strategies and approaches to a problem, restate problem from various perspectives.
B. Apply and adapt problem-solving strategies to solve a variety of problems, including unfamiliar and non-routine problem situations.
C. Use more than one strategy to solve a problem, and recognize there are advantages associated with various methods.
D. Recognize whether an estimate or an exact solution is appropriate for a given problem situation.
E. Use deductive thinking to construct informal arguments to support reasoning and to justify solutions to problems.
F. Use inductive thinking to generalize a pattern of observations for particular cases, make conjectures, and provide supporting arguments for conjectures.
G. Relate mathematical ideas to one another and to other content areas; e.g., use area models for adding fractions; interpret graphs in reading, science and social studies.
H. Use representations to organize and communicate mathematical thinking and problem solutions.
I. Select, apply, and translate among mathematical representations to solve problems; e.g., representing a number as a fraction, decimal or percent as appropriate for a problem.
J. Communicate mathematical thinking to others and analyze the mathematical thinking and strategies of others.
K. Recognize and use mathematical language and symbols when reading, writing and conversing with others.
